

## Central Manchester Clinical Commissioning Group

### Musculoskeletal (MSK) GP management & referral guidance

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

Condition	Key Features	<p><b>1 GP Management</b></p> <p>Analgesia Weight loss if overweight Advice on keeping active Walking aids are available from social services Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL123.pdf">http://www.patient.co.uk/pdf/pilsL123.pdf</a></p>	<p><b>Onward Referral to 4 if:</b></p> <p>Poor pain control</p> <p>Severe loss of function, e.g., walking/dressing</p> <p>For surgical opinion</p>	3	4
		<p><b>2 Direct Access Physiotherapy / Podiatry</b></p> <p>Physiotherapy for motivated patients where pain is controlled but further help is needed to increase muscle strength and function, not for pain relief.</p> <p>Podiatry occasionally indicated for those with leg length discrepancy</p>	<p><b>Diagnostics by GP</b></p> <p>If you suspect OA hip, consider hip XR to assess severity before referral to 3 or 4</p>		
Condition	Key Features	<p><b>1 GP Management</b></p> <p>Analgesia Behaviour modification e.g. relative rest Consider local injection X 2 (or refer to 3 for this procedure) Patient information <a href="http://www.patient.co.uk/pdf/pilsL1048.pdf">http://www.patient.co.uk/pdf/pilsL1048.pdf</a></p>	<p><b>Onward Referral to 3 if:</b></p> <p>Unresponsive to several weeks of GP management (1) or recurrent episodes</p> <p>Unclear diagnosis</p>	3	4
		<p><b>2 Direct Access Physiotherapy / Podiatry</b></p> <p>For suspected biomechanical cause e.g. tight ITB or overpronated feet</p>	<p><b>Diagnostics by GP</b></p> <p>Not routinely indicated</p>		
Condition	Key Features	<p><b>1 GP Management</b></p> <p>Gateway referral to 4 for orthopaedic review</p>	<p><b>Onward Referral to 4</b></p>	3	4
		<p><b>2 Direct Access Physiotherapy / Podiatry</b></p> <p>Not indicated</p>	<p><b>Diagnostics by GP</b></p> <p>Not indicated – normally done in secondary care</p>		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

Condition	Key Features	<b>1 GP Management</b>	<b>Onward Referral to 4 if:</b>	<b>3</b>	<b>4</b>
		<p>Analgesia Weight loss if overweight Advice on keeping active Walking aids are available from social services Patient information leaflet <a href="http://www.arthritisresearchuk.org/arthritis_information/arthritis_types_symptoms/osteoarthritis_of_the_knee.aspx">http://www.arthritisresearchuk.org/arthritis_information/arthritis_types_symptoms/osteoarthritis_of_the_knee.aspx</a></p> <p><b>Consider joint injection (NICE CG59)</b> (or refer to 3 for this procedure)</p>	<p>Poor pain control /night pain Severe loss of function, walking/dressing</p> <p>For surgical opinion</p>		
OA Knee	<p>Pain on weight-bearing.</p> <p>Painful restriction of knee movements</p> <p>Pain and stiffness on moving after sitting</p>	<b>2 Direct Access Physiotherapy / Podiatry</b>	<b>Diagnostics by GP</b>	3	4
		<p>Physiotherapy for motivated patients where further help is needed to increase muscle strength and function.</p> <p>Podiatry may be indicated where a biomechanical component is identified, eg leg length discrepancy / overpronated feet.</p>	<p>Scan <b>not</b> indicated especially if aged over 55</p> <p>X Ray not usually required for primary care management at 1 or 2.</p> <p>If you do suspect OA knee, consider weight bearing X Ray to assess severity <b>before</b> referral to 3 or 4.</p>		
Condition	Key Features	<b>1 GP Management</b>	<b>Onward Referral to 4</b>	<b>3</b>	<b>4</b>
		<p>Gateway referral to 4 for orthopaedic review</p>	<p>Not indicated</p>		
Existing total knee replacement	Pain from knee joint	<b>2 Direct Access Physiotherapy / Podiatry</b>		3	4
		<p>Not indicated</p>			

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

<b>Anterior knee pain</b>	<b>Key Features</b> Pain at front of knee when descending stairs  Pseudo-locking and giving way  Pain at front of knee when getting up from prolonged sitting	<b>1 GP Management</b>  Analgesia Weight loss if overweight Activity modification Patient information <a href="http://www.patient.co.uk/pdf/pilsL873.pdf">http://www.patient.co.uk/pdf/pilsL873.pdf</a>	<b>Onward Referral to 3 if:</b>  Unresponsive to 1 and 2 after several weeks of management  If diagnosis is unclear	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b> Physiotherapy for motivated patients if symptoms not resolving with several weeks of GP management  Podiatry may be indicated where a biomechanical component is identified, eg leg length discrepancy / overpronated feet.	<b>Diagnostics by GP</b>  Not routinely indicated.		
<b>Mechanical knee pain (internal derangement e.g. meniscal tear)</b>	<b>Key Features</b>  True locking and/or giving way  Meniscal and ligament tests positive  History of trauma with episodes of swelling  May be difficult to fully extend the knee joint	<b>1 GP Management</b>  Analgesia Weight loss if overweight Activity modification Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL714.pdf">http://www.patient.co.uk/pdf/pilsL714.pdf</a>	<b>Onward Referral to 3 or 4 if:</b>  If not resolving or recurrent episodes of locking, giving way / instability	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Physiotherapy is indicated for for less severe and non recurrent cases where motivated patients will comply with a rehabilitation regime of strengthening and functional exercises.  The physiotherapist may involve a podiatrist where needed.	<b>Diagnostics by GP</b>  If aged >55 then X ray is done by GP before referral to 3 or 4  MR scan is more usually done at 3 and <b>not</b> by GP		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

<b>Condition</b>  <b>Hallux valgus</b>	<b>Key Features</b>  Pain and valgus deformity of 1 <sup>st</sup> MTP joint	<b>1 GP Management</b>  Analgesia Advice on footwear – low, wide fitting supportive shoes Patient information leaflet <a href="http://www.patient.co.uk/doctor/Hallux-Valgus.htm">http://www.patient.co.uk/doctor/Hallux-Valgus.htm</a>	<b>Onward Referral to 4:</b>  If clearly needs surgical opinion for pain relief	<b>3</b>	<b>4</b>  Note: Surgery is performed for pain relief
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Physiotherapy not routinely indicated Podiatry indicated when pain uncontrolled by 1 and / or orthotic may be needed as correction of the biomechanical factors may prevent excessive pronation and progression of the deformity	<b>Diagnostics by GP</b>  Not routinely indicated		
<b>Condition</b>  <b>Plantar fasciitis</b>	<b>Key Features</b>  First-step heel pain  Palpable tenderness over medial tubercle of calcaneum	<b>1 GP Management</b>  Analgesia Weight loss if overweight Advice on footwear – don't walk barefoot on hard surfaces, wear a supportive cushioned shoe Consider use of 'gel'; heel cups Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL131.pdf">http://www.patient.co.uk/pdf/pilsL131.pdf</a> Activity modification – relative rest from provoking activity Consider injection (up to X 2) or refer to 3 for this procedure	<b>Onward Referral to 3 if:</b>  Symptoms uncontrolled by 1 and 2, or if recurrent episodes  Unclear diagnosis	<b>3</b>	<b>4</b>  Only in very difficult cases
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Physiotherapy not routinely indicated as Gp can advise on calf stretching exercises – see advice leaflet. Podiatry indicated when symptoms not resolving with several weeks of GP management (1) or episodes are recurrent	<b>Diagnostics by GP</b>  Not routinely indicated		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

<b>Condition</b>  <b>Forefoot Pain</b>  <b>neuroma</b>	<b>Key Features</b>  Mulders click  Squeeze test  Interdigital paresthaesia /burning	<b>1 GP Management</b>  Analgesia Advice on footwear - including avoidance of high-heeled and narrow shoes Calf stretching exercises Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL858.pdf">http://www.patient.co.uk/pdf/pilsL858.pdf</a>	<b>Onward Referral to 3 for;</b>  Further assessment and diagnostics if non responsive to 1 and 2	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Podiatry indicated when symptoms not resolving with 1 for considerations of orthotics / pads	<b>Diagnostics by GP</b>  More usually done at 2 or 3		
<b>Condition</b>  <b>Forefoot Pain</b>  <b>Metatarsalgia</b>	<b>Key Features</b>  Diffuse plantar forefoot pain  Prominent Metatarsal heads  Usually comes on gradually	<b>1 GP Management</b>  Analgesia Activity modification – relative rest from provoking activity Advice on footwear - including avoidance of high-heeled and narrow shoes Patient information leaflet <a href="http://www.patient.co.uk/health/Metatarsalgia.htm">http://www.patient.co.uk/health/Metatarsalgia.htm</a>	<b>Onward Referral to 3 for;</b>  Further assessment and diagnostics if non responsive to 1 and 2	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Podiatry indicated when symptoms not resolving with 1 for consideration of orthotics / pads	<b>Diagnostics by GP</b>  More usually done at 2 or 3		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

<b>Condition</b>  <b>Frozen shoulder</b>  <b>(adhesive capsulitis)</b>	<b>Key Features</b>  Pain reaching behind head or back  Painful restriction of passive lateral rotation  Resisted isometric rotator cuff tests relatively pain-free	<b>1 GP Management</b>  Analgesia Encourage active movements within pain limits to avoid stiffening Consider up to X 2 joint injections (or refer to 3 for this procedure) Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL421.pdf">http://www.patient.co.uk/pdf/pilsL421.pdf</a>	<b>Onward Referral to 3 if:</b>  Unresponsive to 1 and/or 2  Unclear diagnosis	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Early referral to physiotherapy only if pain levels controlled, see patient information leaflet.	<b>Diagnostics by GP</b>  Not routinely indicated and more usually done at 3 or 4		
<b>Condition</b>  <b>Shoulder impingement syndrome</b>	<b>Key Features</b>  Painful arc  Resisted isometric tests may be painful  Impingement tests positive  Passive lateral rotation relatively pain-free and near full-range	<b>1 GP Management</b>  Analgesia Relative rest and avoid aggravating movements Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL841.pdf">http://www.patient.co.uk/pdf/pilsL841.pdf</a> Consider up to X 2 acromioclavicular joint injections (or refer to 3 for this procedure)	<b>Onward Referral to 3 if:</b>  Unresponsive to 1 and/or 2 after several weeks of management	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Consider physiotherapy referral if several weeks of GP management (1) have not helped	<b>Diagnostics by GP</b>  Not routinely indicated and more usually done at 3 or 4		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

Rotator cuff tear	<p>Isometric weakness and / or pain of rotator cuff muscles</p> <p>Drop arm test positive</p> <p>Trauma Most common over age 40</p>	<p><b>1 GP Management</b></p> <p>Analgesia Relative rest Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL841.pdf">http://www.patient.co.uk/pdf/pilsL841.pdf</a></p>	<p><b>Onward Referral to 3</b></p> <p>To 3 for further assessment of severity in non mild cases.</p>	3	4
		<p><b>2 Direct Access Physiotherapy / Podiatry</b></p> <p>Physiotherapy for minor tears after several weeks of relative rest Physiotherapy for strengthening in chronic tears in older patient</p>	<p><b>Diagnostics by GP</b></p> <p>Not routinely indicated and more usually done at 3 or 4</p>		
Recurrent shoulder dislocations/subluxations/instability	<p>Patient describes sensation of joint 'out of place'.</p> <p>Positive apprehension tests</p>	<p><b>1 GP Management</b></p> <p>Gateway referral to 4 for significant symptoms or repeated episodes Information leaflet <a href="http://www.patient.co.uk/doctor/Shoulder-Dislocation.htm">http://www.patient.co.uk/doctor/Shoulder-Dislocation.htm</a></p> <p>Physiotherapy 2 for mild/moderate symptoms</p>	<p><b>Onward Referral to 4</b></p> <p>Repeated or significant instability 4</p> <p>Uncertain diagnosis 3</p>	3	4
		<p><b>2 Direct Access Physiotherapy / Podiatry</b></p> <p>Physiotherapy for mild/moderate instability infrequent or one off episode</p>	<p><b>Diagnostics by GP</b></p> <p>Usually done by 4</p>		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

Condition  <b>'Tennis elbow' (lateral epicondylitis)</b>	Key Features  Painful resisted wrist extension	<b>1 GP Management</b> Analgesia Activity modification Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL165.pdf">http://www.patient.co.uk/pdf/pilsL165.pdf</a> Consider up to X 2 joint injections (or refer to 3 for this procedure)	<b>Onward Referral if:</b>  Unresponsive to 1 and 2	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Physiotherapy if unresponsive to 1	<b>Diagnostics by GP</b> Not routinely indicated and more usually done at 3 or 4		
Condition  <b>'Golfers elbow' (medial epicondylitis)</b>	Key Features  Painful resisted wrist flexion	<b>1 GP Management</b> Analgesia Activity modification Patient information leaflet <a href="http://elbowdoc.co.uk/common-elbow-conditions/golfers-elbow">http://elbowdoc.co.uk/common-elbow-conditions/golfers-elbow</a> Consider up to X 2 joint injections (or refer to 3 for this procedure) <i>Beware ulnar nerve</i>	<b>Onward Referral if:</b>  Unresponsive to 1 and 2	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Physiotherapy if unresponsive to 1	<b>Diagnostics by GP</b> Not routinely indicated and more usually done at 3 or 4		
Condition  <b>Carpal tunnel syndrome</b>	Key Features Nocturnal hand paraesthesia in median nerve distribution. Patient often describes having to 'shake' hand to relieve symptoms	<b>1 GP Management</b> Exclude referred symptoms from cervical spine/diabetes/thyroid Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL24.pdf">http://www.patient.co.uk/pdf/pilsL24.pdf</a> Advice re using wrist splint Pregnancy wait 4 months post partum before considering onward referral	<b>Onward Referral to 3 if:</b>  Symptoms are not settling with several weeks of GP management (1) or if symptoms severe	<b>3</b>	<b>4</b>  <b>Access to one stop shop is via tier 2</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Not routinely indicated	<b>Diagnostics by GP</b>  <b>Refer to 3</b> for further assessment and access to one stop shop		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

Condition  <b>Trigger finger/thumb</b>	Key Features  Triggering of digit and possible tender nodule in palm	<b>1 GP Management</b>  Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL431.pdf">http://www.patient.co.uk/pdf/pilsL431.pdf</a> Consider local injection depending on severity of symptoms (or refer to 3 for this procedure)	<b>Onward Referral to 3 if:</b>  Unresponsive to 1	<b>3</b>	<b>4</b> <b>Note;</b> considered if triggering is still happening 12 months post a single steroid injection or recurrent triggering or Fixed Flexion Deformity
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Not routinely indicated	<b>Diagnostics by GP</b>  Not routinely indicated		
Condition  <b>Ganglion</b>	Key Features  Palpable	<b>1 GP Management</b>  Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL69.pdf">http://www.patient.co.uk/pdf/pilsL69.pdf</a>	<b>Onward Referral 3 if:</b>  Further assessment needed	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Not routinely indicated	<b>Diagnostics by GP</b>  Not routinely indicated		
Condition  <b>Dupuytren's contracture</b>	Key Features  Palmar thickening  Flexion deformity of affected digits	<b>1 GP Management</b>  Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL53.pdf">http://www.patient.co.uk/pdf/pilsL53.pdf</a>	<b>Onward Referral to 4 if:</b> MCP joint fixed flexion deformity 30 degrees + Or interfering with work/hobbies	<b>3</b>	<b>4</b>  MCP joint fixed flexion deformity 30 degrees or more requires surgical opinion
		<b>2 Direct Access Physiotherapy / Podiatry</b>  Physiotherapy in the early stages may help with function.	<b>Diagnostics by GP</b>  Not routinely indicated		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------

Condition  OA thumb	Key Features  Pain and stiffness and tender to palpate over joint line.	1 GP Management  Advice with rest / using splint Consider joint injection (or refer to 3 for this procedure)	Onward Referral to 3 if:  Unresponsive to 1 or 2  Unclear diagnosis	3	4
		2 Direct Access Physiotherapy / Podiatry  Consider physiotherapy if symptoms mild to moderate	Diagnostics by GP  More usually done at 3 when considering onward referral for surgical opinion		
Condition  De Quervain's tenosynovitis	Key Features  Positive Finkelstein's test  Pain with resisted thumb extension and abduction	1 GP Management  Analgesia Advice re; relative rest. Using splint Patient information leaflet <a href="http://www.patient.co.uk/pdf/pilsL469.pdf">http://www.patient.co.uk/pdf/pilsL469.pdf</a> Consider joint injection (or refer to 3 for this procedure)	Onward Referral to 3 if:  Unresponsive to 1 or 2	3	4
		2 Direct Access Physiotherapy / Podiatry  Not routinely indicated	Diagnostics by GP  Not routinely indicated		

<b>Condition</b>	<b>Key features</b>	<b>GP management and advice for referral to direct access physiotherapy/podiatry</b>	<b>Consider onward referral if:</b>	<b>Tier 2/CAT via Gateway</b>	<b>Secondary care via Gateway</b>
------------------	---------------------	--	-------------------------------------	-------------------------------	-----------------------------------

<b>Condition</b>	<b>Key Features</b>	<b>1 GP Management</b>	<b>Onward Referral if:</b>	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>	<b>Diagnostics</b>		
<b>Condition</b>	<b>Key Features</b>	<b>1 GP Management</b>	<b>Onward Referral if:</b>	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>	<b>Diagnostics</b>		
<b>Condition</b>	<b>Key Features</b>	<b>1 GP Management</b>	<b>Onward Referral if:</b>	<b>3</b>	<b>4</b>
		<b>2 Direct Access Physiotherapy / Podiatry</b>	<b>Diagnostics</b>		

Condition	Key features	GP management and advice for referral to direct access physiotherapy/podiatry	Consider onward referral if:	Tier 2/CAT via Gateway	Secondary care via Gateway
-----------	--------------	---	------------------------------	------------------------	----------------------------
